

36kw 6-way inverter

Overview

What is a 36kw inverter?

The 36kW is an extension of the existing 23kW and 28kW inverter line and features a dual MPPT design with up to 98.6% conversion efficiency and wide operating window of 240-950Vdc. An installer friendly and integrated wire box simplifies installation and reduces BoS costs.

How much power does a 6kW string inverter generate?

This 6kW string inverter kit requires up to 345 square feet of space and generate 400 to 1,000 kilowatt hours (kWh) of alternating current (AC) power per month. Not bad when you consider that the average American household averages 920kWh per month! Actual power generated will vary based on location, equipment and installation factors.

Is a 6 kW inverter worth it?

The combination of these two things means that it's probably not worth your while having a system at 6 kW. A 5 kW inverter will be the most cost effective. And the extra 1 kW of panels means that you'll get best use out of your inverter - it will spend more time running at its peak output.
