What is a 6V to 12V converter (inverter)?

The PGPI is a 6V to 12V converter for vehicles that still have a 6V, positive ground electrical system. It is necessary if you are still running positive ground for all of our radios, which run on a 12V, negative ground electrical system. The PGPI positive ground inverter comes with detailed wiring instructions.

Is a 6 kW inverter worth it?

The combination of these two things means that it's probably not worth your while having a system at 6 kW. A 5 kW inverter will be the most cost effective. And the extra 1 kW of panels means that you'll get best use out of your inverter - it will spend more time running at its peak output.

How many volts does a 5V circuit have?

With 5V into the module the primary waveform is a 10uS wide 125V half sine

pulse at 6kHz or about 15kV at the input of the tripler circuit which bumps it up to 45kV. The output is 3 x 5.6 nF/1600V film capacitors in series so if you run this module open output the caps or multiplier diodes will fry as they are only rated together for 4800V.
