

Africa s 8 3 billion energy storage power station

Overview

The High Dam has resulted in protection from and , an increase in agricultural production and employment, electricity production, and improved navigation that also benefits tourism. Conversely, the dam flooded a large area, causing the relocation of over 100,000 people. Many archaeological sites were submerged while others were relocated. The dam is blamed for coastline eros.

How much energy does Africa produce?

Energy from hydro contributed less than 3%. Africa's energy production landscape is heavily fossil-fuel dependent (North and Southern Africa in particular) and is primarily composed of oil at 43.5%, gas at 32% and coal at 19%, much of which is exported.

Will energy demand outpace supply in Africa?

The Combined scenario demonstrates that while energy production can significantly increase—particularly through renewables like solar, wind, and hydro—demand will still outpace supply, reinforcing Africa's dependence on energy imports.

What percentage of Africa's energy comes from renewables?

In 2023, only 3.3% of Africa's total energy production came from renewables, compared to 12.8% in South America and 5.9% in South Asia. The Africa Energy Chamber in its 2025 Outlook report notes that, currently, nearly 80% of Africa's solar and wind-based capacity is installed in North Africa, South Africa, Kenya, Ethiopia, Angola and Senegal.

How much energy does Africa produce in 2023?

In 2023, Africa only produced 4.8% of its energy from renewables, with North Africa doing particularly poorly. The other two comparable developing regions, South Asia and South America, produced 8.3% and 15.4%, respectively.

How can we save energy in Africa?

Additional savings could come from implementing stricter building codes and energy standards as well as greater industrial efficiencies such as in cement, steel and chemicals. The African Development Bank (ADB) estimates these measures could save up to 10% of the continent's total energy consumption by 2030.

Where are Africa's Energy Resources located?

Most gas reserves are found in Nigeria, Algeria, Mozambique, Egypt and Libya, while South Africa and Zimbabwe dominate in coal reserves. Much of these resources are exported (US\$86.7 billion in 2023) making Africa a net energy exporter since energy imports, mostly refined petroleum, amounted to US\$50 billion.
