

# **Being electrocuted by an outdoor power source**

## Overview

---

An electric shock occurs when a person comes into contact with an electrical energy source. This can often result in a burn. Learn more about treating electric shock and electrical burns.

Adolescents and adults are prone to high-voltage shock caused by mischievous exploration and exposure at work. About 1,000 people in the.

For a high-voltage shock, seek care at a hospital's emergency department. Following a low-voltage shock, call the doctor for the following reasons: 1. It has been more than 5.

An electric shock occurs when a person comes into contact with an electrical energy source. Electrical energy flows through a portion of the body, causing a shock. Exposure to electrical energy may result in no injury at all or may result in devastating damage.

A person who has had an electric shock may have very little external evidence of injury or may have obvious severe burns. The person could even be in cardiac arrest. Burns are usually most severe at the points of contact with the electrical source and the.
