

Burkina Faso small energy storage project construction

Overview

Can solar-battery minigrids provide electricity to off-grid areas in Burkina Faso?

Due to falling hardware costs, the rise of digital technologies and the adoption of private-sector business model, solar-battery minigrids can now be a competitive option to provide electricity to off-grid areas in Burkina Faso.

What is Burkina Faso's national AMP Project?

Burkina Faso's National AMP Project aims to increase access to clean energy by improving the financial viability of, and promoting large-scale commercial investment in, solar photovoltaic minigrids in Burkina Faso.

What is Burkina Faso's rural electrification rate?

Burkina Faso's rural electrification rate has already been rapidly increasing, going from 3.2% in 2016 to nearly 10% in 2019, through the extension of the national grid. However, because extending the grid is a costly electrification method, the overall rural electrification rate has remained low.

How much does AMP cost in Burkina Faso?

Lasting 48 months from February 2023 to January 2027 for a total cost of 1,086,476,580 CFA francs, Burkina Faso's National AMP Project is funded by the GEF, UNDP and the Government of Burkina Faso. It is implemented by the Burkinabè Agency for Rural Electrification (ABER) through four components:
