

China-Europe development of energy storage battery manufacturers

Overview

Will Europe become an assembly plant for Chinese battery manufacturers?

You'll also receive our weekly Editor's Digest Newsletter. Full Europe risks becoming “an assembly plant” for Chinese battery manufacturers unless the continent puts in place regulations that ensure technology and skills transfer in return for state aid, according to a new study.

Who makes energy storage batteries?

Below are ten of the most influential energy storage battery manufacturers worldwide, covering a wide range of applications from residential to commercial and grid-level storage. The list is in no particular order: 1. CATL (Contemporary Amperex Technology Co., Limited) – China One of the largest manufacturers of lithium-ion batteries globally.

Why are Chinese battery manufacturers thriving?

Chinese battery manufacturers are thriving, largely due to the surge in EV sales within China, where electric vehicles make up about half of all new car purchases. This market size gives Chinese battery makers a significant edge over international competitors.

Where does Europe's battery investment come from?

A quarter of Europe's battery investment comes from China Announced gigafactory capacity by origin, Jan 2025 (% share) To fill the gap, more European carmakers are partnering with Chinese battery makers to ensure battery supplies for the aggressive rollout of electric cars to meet tougher emissions rules.

Are European carmakers partnering with Chinese battery makers?

To fill the gap, more European carmakers are partnering with Chinese battery makers to ensure battery supplies for the aggressive rollout of electric cars to meet tougher emissions rules. In December, Stellantis said it would build a

€4.1bn lithium battery factory in Spain with China's CATL, the world's largest battery maker.

What is the Chinese battery ecosystem?

The Chinese battery ecosystem covers all steps of the supply chain, from mineral mining and refining to the production of battery manufacturing equipment, precursors and other components, as well as the final production of batteries and EVs. Chinese producers have prioritised lithium-iron phosphate (LFP), a cheaper battery chemistry.
