

China s hybrid energy 5G network base stations 600 000

Overview

How many 5G base stations has China built?

China has exceeded its target for 5G base stations six months ahead of time, having built 3 million of them by the end of June, latest government data showed. The figures also suggest that China is leaving the United States far behind in the 5G connectivity race, with more than 600,000 new stations added in the last three months alone.

Does China have a 5G network?

Given that China currently has the largest 5G network in the world (~1.53 million base stations by the end of 2021, Table S1) and that base station number was projected by up to 6–8 million by 2030 (CCID Consulting, 2020), concerns are being expressed regarding 5G mobile networks' environmental effects and sustainability.

Is China leaving the US behind in 5G connectivity?

The figures also suggest that China is leaving the United States far behind in the 5G connectivity race, with more than 600,000 new stations added in the last three months alone. By comparison, the US built about 100,000 5G base stations between 2019 and 2021, according to the latest available industrial estimate.

How much CO₂ will China's 5G network produce?

Under the model predicted 5G base stations, China's 5G network could yield 0.15–0.29 GtCO₂ /yr emissions subject to the nation's BDDL from 40 to 80 % by 2030. Both 5G base stations and CO₂ emissions are significantly lower than the previous estimates.

How much electricity will China's 5G network consume in 2030?

Under the scenario of business-estimated six million base stations in 2030, the share of electricity consumed by China's 5G networks in 2030 could reach 8.4

% of the national total power generation, causing 0.44 GtCO₂ /yr CO₂ emissions.

How much does a 5G module cost in China?

The average price of a 5G module for industrial application in China has dropped below 400 yuan (US\$55.41), while the energy consumption of each base station has fallen by more than 20 per cent compared with the early deployment period, according to the ministry. China first started rolling out 5G stations around 2019.
