

Coastal Base Station Container

Overview

What is the best foundation for a shipping container?

The most popular long-term shipping container foundations are slab foundations, strip foundations, pile foundations, and pier foundations. A concrete slab foundation is a flat, solid base made of poured concrete. It evenly distributes the container's weight, prevents sinking, and protects the underside from moisture, pests, and corrosion.

Do modified shipping container structures need different foundations?

In the world of modified shipping container structures, no one foundation solution is right for every application. Different container structures—ranging from large, multi-unit structures to single-unit containers—need different foundations. Want to take a closer look at all of the foundation options (and recommendations)?

Let's dive in!.

How do you put a shipping container on top of concrete?

- **Cement blocks:** This approach is also known as “blocking”, and involves propping your shipping container on top of concrete blocks. The weight of the shipping container should keep the concrete foundation blocks firmly in place. Blocking is a quick and effective foundation for short-term container placements.

How do you move a shipping container off the ground?

Cement blocks and railroad ties will raise your shipping container off the ground, which will prevent water from pooling around the bottom and causing corrosion. The foundation styles can also make moving your shipping container a little easier when you no longer need it to be in that location.

What does the facility & container safety branch do?

The Facility and Container Safety Branch is Coast Guard's Program Manager for the facility compliance regulations found at: 33 CFR 126 – Handling of Dangerous Cargo at Waterfront Facilities (including the Explosive Handling Supervisor program) 33 CFR 127 – Waterfront Facilities Handling Liquefied Natural Gas and Liquefied Hazardous Gas.

How do you keep a container from settling?

Ultimately it will help keep your container from settling and is best used to stabilize your unit on sloped ground. For single-unit containers in the same location long term, consider using a concrete foundation or a gravel pad. For many permanent applications, a concrete pad is likely the best solution to keep your structure level.
