

Communication Portable Power Supply

Overview

Why are power supplies important for information and communication devices?

Power supplies for information and communication devices are important devices for providing stable power supply 24 hours a day, 365 days a year for the various communication devices used to provide data communication services, such as telephone and Internet.

What is a power supply device?

The devices provide direct access to a large range of highly informative data-sets that help to monitor, analyse and optimise the complete power supply concept of any machinery – from the quality of the power grid, to the AC input and the DC output as well as the DC distribution.

What are the different types of power supplies?

There are a wide variety of such power supplies, including those which direct current power supplies which convert alternating power supplied by commercial systems into direct power, and alternating power supplies which invert stable direct power into alternating power.

Why do telecommunication power supplies use direct current?

Therefore using direct current power from a rectifier connected to storage batteries as input, and inverting it to alternating current allows for continued supply of power to telecommunication equipment even if there is a power outage. Introductions to Shindengen Telecommunication Power Supplies information.

Why should I use smart power supplies?

Please feel free to contact our application consultants. Smart power supplies can immediately provide alerts or error messages in case of critical power supply scenarios such as phase failures or transients on the AC-side. This is

especially interesting for systems affected by bad AC grid conditions.

How do Puls power supplies connect to EtherCAT controllers?

PULS power supplies with an integrated EtherCAT ports can be connected directly to EtherCAT controllers – without the need for additional gateways, providing easy and rapid access to all application data and power supply functions.
