

Czech energy storage 15kW

Overview

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Will the Czech solar market shift towards larger-scale solar and storage market?

With the residential segment dominating the storage market in the Czech Republic in the coming years, the Czech Solar Association (Solární Asociace) also pointed out that it expects a shift towards larger-scale solar and storage market, given the potential of energy storage in balancing the grid and optimizing energy structure.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.
