

Czech standard photovoltaic module panels

Overview

The had almost two (GW) of capacity at the end of 2010, but installed less than 10 megawatts (MW) in 2011 due to the being reduced by 25%, after installing almost 1,500 MW the year before. Installations increased to 109 MW in 2012. In 2014, no new installations were reported.

How much photovoltaic capacity does the Czech Republic have?

The Czech Republic had almost two gigawatts (GW) of photovoltaic capacity at the end of 2010, but installed less than 10 megawatts (MW) in 2011 due to the feed-in tariff being reduced by 25%, after installing almost 1,500 MW the year before.

How does a rooftop PV system work in the Czech Republic?

In the Czech Republic, a rooftop PV system is usually developed and operated by a third-party developer or directly by the building owner or its affiliates. It is also possible for the building owner to develop the PV system and lease it to a third party, but this is not very common in the Czech market.

How reliable is the power supply in the Czech Republic?

The electrical power supply in the Czech Republic is generally reliable. The country maintains a high standard of reliability, with the Loss of Load Expectation (LOLE) indicator set at a maximum of 15 hours per year. This means that, on average, the total duration of power outages should not exceed 15 hours annually. 4
