

Czech thin-film photovoltaic panel manufacturers

Overview

What is a thin-film photovoltaic panel?

Instead of using silicon in crystalline form, they use a thin layer of photovoltaic material deposited on a substrate such as glass, plastic or metal. There are different types of thin-film panels depending on the material used, such as cadmium telluride (CdTe), amorphous silicon (a-Si) or copper indium gallium diselenide (CIGS).

What are the diagnostics of photovoltaic modules?

Diagnostics means: measurement of VA curves under illumination, electroluminescence and IR thermogram. If necessary, it also includes a test of the immediate insulation condition of the PV module. We focus on the production of custom photovoltaic modules. We can divide our products according to the purpose of their use:.

Can photovoltaic panels with broken glass be repaired?

Metoda oprav ve fázi prvotního testování. Photovoltaic panels with broken glass cannot be repaired . We can make you a new modulel with the same parameters. To create an individual offer, please contact us directly or via the contact form. 19 EUR /1 PVM for cases where the module cannot be repaired or the requirement "only measured".

Czech thin-film photovoltaic panel manufacturers

Production of customized PV modules and the repairs of ...

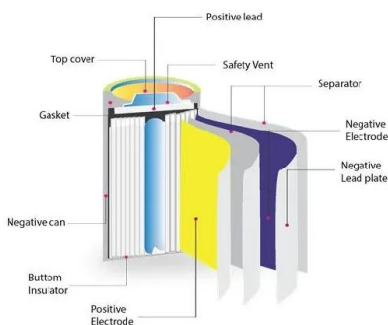

In the case of a smaller number of PV panels for repair, it is more advantageous to send the panels behind us to Roznov pod Radhostem/Czech Republic. We will carry out repairs on site ...
