

# **French BMS battery management system**

## Overview

---

BMS PowerSafe designs and produces the most secure intelligent on-board solutions in the sector. Its electronic management boards are compatible with all battery technologies, optimising their operation, safety and lifespan. What is a battery management system (BMS)?

The BMS is an integral part of Leclanché's high-voltage battery systems. It ensures software and hardware safety for over/under voltage, over current, over/under temperature and pre-charge protection. Built-in technology and specific algorithms such as SOC, SOH, cell/ module balancing and real-time control over charge/ discharge current.

Where are BMS batteries made?

The company HQ and factory are in Bordeaux, up for small and large series production. marine batteries. BMS PowerSafe is the French industrial company of Startec Energy Group. The company has unique expertise in the BMS (Battery Management System) market.

How will BMS technology change the future of battery management?

As the demand for electric vehicles (EVs), energy storage systems (ESS), and renewable energy solutions grows, BMS technology will continue evolving. The integration of AI, IoT, and smart-grid connectivity will shape the next generation of battery management systems, making them more efficient, reliable, and intelligent.

What is BMS powersafe?

The company has unique expertise in the BMS (Battery Management System) market. BMS PowerSafe designs and produces the most secure intelligent on-board solutions in the sector. Its electronic management boards are compatible with all battery technologies, optimising their operation, safety and lifespan.

How important is a battery management system supplier?

The BMS market is anticipated to grow at a robust compound annual growth rate (CAGR) of 18.20% throughout the forecast period. As the importance of BMS is becoming more and more known, choosing a qualified Battery management system supplier is becoming more and more important.

What makes a good battery management system?

A BMS must be designed for specific battery chemistries such as:

- 02. Power Consumption: An efficient BMS should consume minimal power to prevent draining the battery unnecessarily.
- 03. Scalability: For large-scale applications (EVs, grid storage), a scalable BMS is essential.
