Enjoy sharper detail, more accurate color, lifelike lighting, believable backgrounds, and more with our new model update. Your generated images will be more polished than ever. © 2025 Getty Images.

How much power does a lithium ion storage facility use?

Built by AES Energy Storage, it involved thousands of lithium-ion cells in storage containers that together combined to provide 32 megawatts of power and deliver it for about 15 minutes. "It was eight megawatt-hours total," said John Zahurancik, who was vice president of AES Energy Storage at the time and showed me around the facility back then.

How long does it take to build a storage facility?

NextEra Energy, one of the country's largest utilities, underlined this on its most recent earnings call, when executives said "You can build a storage facility in 15 months and a solar project in 18 months. When is gas really going to be able to contribute at scale?

We need shovels in the ground today."
