

# **Guatemala 5G base station distribution box**

## Overview

---

What is a 5G base station?

5G base stations operate on various frequency bands, including sub-6 GHz and mmWave, to deliver ultra-low latency, high data throughput, and enhanced capacity. They support massive MIMO (Multiple Input Multiple Output) technology, enabling improved coverage and simultaneous connections for a large number of devices.

How 5G technology is transforming connectivity?

5G technology is revolutionizing connectivity, and the manufacturers of 5G equipment are leading this transformation. From modems and base stations to RAN, antenna arrays, and core networks, these companies are providing cutting-edge solutions. Leading vendors are offering innovative products to enhance network speed, coverage, and efficiency.

What is a 5G NR Network?

As defined in 3GPP TS 38.300, the 5G NR network consists of NG RAN (Next Generation Radio Access Network) and 5GC (5G Core Network). As shown, NG-RAN is composed of gNBs (i.e., 5G Base stations) and ng-eNBs (i.e., LTE base stations). The figure above depicts the overall architecture of a 5G NR system and its components.

What is a 5G radio access network?

The 5G Radio Access Network (RAN) is the interface between user devices and the 5G core network. It comprises base stations and small cells that manage radio communications, enabling ultra-fast data transfer and low-latency connections.

What is the function of a GTENT 5G Baseband Unit?

The GTENT 5G Baseband Unit is responsible for providing state-of-the-art features such as Multi-User Multi-Antenna Communication (MU-MIMO)\, Carrier

Aggregation (CA) and Beamforming. These features increase the service quality, user experience, and amount of simultaneous data transmission.

What is a 5G core?

The 5G core is the central component of the 5G network, responsible for managing data traffic, mobility, and network services. It employs a cloud-native, service-based architecture that ensures flexibility and scalability for diverse use cases.
