

High-altitude installation of communication base station wind power equipment

Overview

Should high altitude platform stations be complemented with Haps systems?

Abstract: High altitude platform station (HAPS) systems have recently attracted renewed attention. While terrestrial and satellite technologies are well established for providing connectivity services, they face certain shortcomings and challenges, which could be addressed by complementing them with HAPS systems.

What is a high altitude platform station?

This concept is known under the designation High Altitude Platform Stations (HAPS) as IMT base stations, or HIBS. By using the same spectrum as already identified for IMT and where deployments already exist today, HIBS can extend the operator's coverage area and benefit from the already existing device ecosystem.

What is a high altitude system?

Unlike satellites, high altitude systems are aircraft that fly or float in the stratosphere, typically at altitudes of around 20km. They could be high-altitude free-floating balloons, airships, or powered fixed-wing aircraft that use either solar power or an on-board energy source.

What is a high altitude satellite?

LEO and MEO satellite constellations are used today to deliver services, such as global positioning, mobile communications, and IoT services. Unlike satellites, high altitude systems are aircraft that fly or float in the stratosphere, typically at altitudes of around 20km.

What are satellite and high-altitude platform systems (Haps)?

For these reasons, the industry is exploring satellite and high-altitude platform systems (HAPS). Satellite systems can be categorised according to the orbits that they utilise, such as geostationary, middle-earth, or low-earth orbits

(GEO, MEO, and LEO).

Can unmanned high-altitude platforms provide broadband connectivity?

Operating in the stratosphere, unmanned high-altitude platforms (HAPS) could bring connectivity to areas that are either not covered, or are only partially covered, by terrestrial cellular networks. This whitepaper highlights the potential of HAPS to meet the need for more broadband connectivity worldwide.
