Overview

How many MW of electricity does South Africa have?

Despite having one of the larger populations in the region, at more than 25 million, the country has one of the smaller electricity sectors, with a total generating capacity of just 324MW, of which more than 90% comes from fossil fuel sources.

What is the main source of power in West Africa?

Hydroelectric power is the dominant source of power in the region and is the focus of most of the large schemes underway, although there are also plans to develop more gas-fired plants and some initiatives to develop coal-fired capacity. West African countries have now begun to develop utility-scale solar power.

Where in West Africa is the biggest power generation project?

There are significant power generation projects planned or underway in most parts of West Africa, with regional economic heavyweight Nigeria the most active market and also home to the biggest scheme: the 3GW Mambilla hydroelectric plant.

Is load shedding causing the electricity crisis in South Africa?

However, in 2018 the current electricity crisis in South Africa was demonstrated again via load shedding and has been worsening ever since, culminating in 2019 when load shedding reached Stage 6 (or a capacity shortage of 6 000 MW) for the first time in December of that year.
