

Huawei photovoltaic base station power supply settings

Overview

How to expand Huawei battery capacity?

In capacity expansion scenarios, you need to purchase power cables and signal cables for bottom cascading from Huawei. Before connecting cables, ensure that the DC switch on the battery and all the switches connected to the battery are set to OFF. Otherwise, the high voltage of the battery may result in electric shocks.

How do I set the PV power preferred function?

You can set whether to use the PV Power Preferred function. For details, see [Enabling PV Power Preferred \(Charge Now\)](#). The owner can change Maximum Dynamic Power when the charger is in the charging state. Maximum Dynamic Power set by the owner must be less than or equal to Maximum Power set by the installer.

How to install a distributed power system?

Step 1 Install the distributed power system. 1. Install the wall mounting kit. 2. Move the mounting kit from the rear of the lithium battery to the left side, and install the lithium battery on the wall. 3. Install the connecting kit and combine the PSU with the lithium battery. 4. Install the connecting plate. Step 2 Connect the ground cable.

How much power can a battery module supply?

One power module and one battery module: If the product supplies power separately, the load power cannot exceed 2.5 kW. If the load power exceeds 2.5 kW, the product shuts down for 10 seconds and then restarts, which repeats for three times. The product runs with a power limit of 2.8 kW for 1 hour and then stops working.

How do I maintain a downstream electrical or power distribution device?

Before maintaining a downstream electrical or power distribution device, turn

of the output switch on the power supply equipment. During equipment maintenance, attach "Do not switch on" labels near the upstream and downstream switches or circuit breakers as well as warning signs to prevent accidental connection.

How do I install the EPO switch?

By default, the EPO switch is closed. Press and hold the EPO switch for 3s to shut down the entire system (including the genset). The connection position of the EPO switch must be different from the mains detection position of the ATS. Prepare the EPO switch and cable before installation. The recommended cable size is 22 AWG.
