

Irish container power plant

Overview

What will Ireland's New gas-fired power plants do?

When completed, the new plants combined will provide 200MW of flexible gas-fired power generation; enough power to keep 100,000 homes fully powered all year round. Because they are flexible, they can be easily switched on and off as demand peaks, helping to make Ireland's energy supply more stable and secure.

Could Donegal's rusting battery containers be the key to Ireland's energy future?

Ireland's energy future depends on more than just building wind and solar farms. We need energy to be both clean and dependable – when the wind blows and when it doesn't. That requires strategically located, long-duration storage. Donegal's rusting battery containers might be a critical step towards that future.

What is a containerised modular power plant?

The containerised modular power plant is built to strict high-quality standards and accommodates ambient and heat temperatures, noise attenuation and adhere to site-specific requirements.

Irish container power plant

51.2V 150AH, 7.68KWH

Containerised Power Plant

Due to its compact design and accessibility for service and maintenance, our containerised power plant offers a smart and efficient 'plug and play' approach, designed to expedite site ...
