

Israel container power generation equipment

Overview

Which genset containers are available?

All genset containers are also available with an option for -40°C and most variants can be upgraded for $+45^{\circ}\text{C}$. A broad range of options, both mechanical and electrical, are available to ensure that our containers meet the project requirements. For example, we offer several heat recovery configurations and exhaust after treatment systems.

What size generator container do I Need?

Our generator containers for Type 2, 3, and 4 gas engines have a standard 40-foot length. Width and height depend on engine type, the application (power generation only or CHP) and ambient conditions. Customized sizes to accommodate special project requirements are available on request.

What is the standard ventilation for genset containers?

The standard ventilation is designed for ambient temperatures from -25°C to $+40^{\circ}\text{C}$. The genset containers can be equipped with several additional features to enable operation at lower temperatures on request. Type 6 containers are available with a similarly broad range of options that we offer for the Type 2 / 3 / 4 containers.

What types of containers are available?

Type 6 containers are available with a similarly broad range of options that we offer for the Type 2 / 3 / 4 containers. These include several heat recovery configurations, exhaust after treatment systems, compliance with country-specific regulations, earthquake safety requirements and various ambient conditions.

What are the sound pressure levels available for genset containers?

Lower sound pressure levels are available on request. The standard ventilation is designed for ambient temperatures from -25°C to $+34^{\circ}\text{C}$. All genset

containers are also available with an option for -40°C and most variants can be upgraded for $+45^{\circ}\text{C}$.
