

Jamaican Government on Base Station Energy Management System

Overview

How does Jamaica's energy system work?

Jamaica's energy system is highly dependent on imported fossil fuels, petroleum imports account for over 80 percent of electricity production. This oil import dependency comes at a high cost. Here's a quick glance at how the sector has performed over the last five (5) years. Commercial & Industrial (Sml.) AVERAGE NO. OF CUSTOMERS.

What is Jamaica doing to improve energy security?

The Jamaican Government has been actively pursuing strategies to reduce the country's dependence on imported fuel and to enhance energy security, by diversifying its energy sources and investing in renewable energy. The National Energy Policy.

How can battery energy storage help Jamaica?

Battery energy storage systems (BESS) are now emerging as a cornerstone technology to address these challenges—helping Jamaica stabilize its grid, unlock more renewable energy, and reduce electricity costs for both consumers and businesses. The country's electricity cost can reach as high as \$0.32 per kilowatt-hour, far above global averages.

Why is energy storage important in Jamaica?

Jamaica is committed to reducing its dependence on imported fossil fuels. The country's National Energy Policy sets an ambitious target: 50% of electricity from renewable sources by 2037. Energy storage plays a critical role in achieving this target. Key policy support includes:.

Does Jamaica have a power grid?

The grid currently provides electricity access to approximately 97% of Jamaican households. Jamaica Energy Partners (JEP) Jamaica Energy Partners is an Independent Power Provider that began commercial operations in

October 1995, through its ownership of the Doctor Bird Power Plant.

What is the primary source of energy in Jamaica?

The primary source of energy in Jamaica is imported oil. The Jamaican economy is characterized by high energy intensity and low efficiency and is almost completely dependent on it. Petroleum consumption is concentrated in three areas, namely: bauxite/alumina, power generation and transport.
