

# **Liechtenstein Outdoor Base Station Planning**

## Overview

---

What is a low-altitude network base station planning model?

To address these challenges, we propose a novel low-altitude network base station planning model based on the Proximal Policy Optimization (PPO) algorithm. Our approach involves calculating the low-altitude coverage capabilities of different base station types using ray tracing techniques.

What are the Dio base stations guidelines?

dio base stations. Background to the Guidelines The main elements of these guidelines include clear information exchange with local authorities and other key stakeholders, proactive operator site sharing initiatives when feasible, environmental sensitivity considerations, and m.

How can a decision model be used for base station placement?

We construct a decision model for base station placement and utilize the PPO algorithm to determine optimal base station configurations. Through reinforcement learning training and simulation validation, we demonstrate that our model effectively generates base station deployment plans, achieving predefined signal coverage objectives.

Do you need a licence to install a base station?

additional, technology specific base stations. Operators may be required as a condition of their licence to install base stations to meet government or regulatory coverage targets. Requirements and conditions that operators face in order to be granted a permit for base station deployment vary.

Do you need a permit for a base station?

ion of options such as usage of existing sites. For base stations higher than 15 meters permission from the civil aviation authority is needed. Additionally, special permissions have to be granted before building permits if a town plan is not in place. Base station al of the landlord. Timescales for Permission The
