

Lithium battery pack and power supply

Overview

What is a lithium-ion battery pack?

The Lithium-Ion battery packs at La-Z-Boy have multiple functionalities. Here are some of them in a nutshell. Works with all La-Z-Boy power recliners, sofas, and sectionals (excluding lift chairs). Red flashing light while charging, green steady light when fully charged (approx. 5-7 hours charge time).

What are energy storage lithium battery packs?

Energy storage lithium battery packs are based on lithium iron phosphate batteries. They are a lithium battery system designed in series with modules, featuring a reliable BMS system and high-performance equalization technology to improve overall safety and service life.

Why should you choose a lithium-ion battery for a three-phase UPS?

With a higher power capacity, lithium-ion batteries enable three-phase UPS systems to deliver robust performance within a confined physical footprint, and their extended lifespan reduces complexities and cost savings in large installations. A wide range of runtimes from 3 minutes to an hour+ are available.

Why is lithium ion used in ups?

Why lithium-ion?

Lithium-ion chemistry offers exceptional advantages in UPS applications due to its lightweight design and high energy density, allowing more energy storage in compact spaces. These batteries last longer, enduring more charge cycles with fewer replacements and reducing long-term costs.

What is lithium ion battery management system (BMS)?

Lithium-ion batteries also charge quickly, exhibit higher efficiency and have lower cooling needs due to a wider temperature tolerance. Additionally, the

integrated advanced battery management system (BMS) monitors and regulates system performance and can operate on either internal DC logic power or AC logic power supplied by the customer.
