

Malawi automated photovoltaic module equipment is affordable

Overview

How can decentralised solar mini-grids improve energy access in Malawi?

The project addresses the challenges of energy access in Malawi, where less than 12% of the population are connected to the national grid, limiting development and economic growth. Decentralised solar mini-grids offer a low carbon and reliable source of electricity in areas unlikely to receive a grid connection in the near future.

What is Malawi energy access project (MEAP)?

Increasing electricity access through the Malawi Energy Access Project The 2019 ambitious \$100 million Malawi Energy Access Project (MEAP) aims to fast-track electrification efforts and provide electricity access to approximately 1.9 million people, constituting 9.5% of the population. So far, more than 140,000 households have been connected.

Is it possible to live without electricity in Malawi?

We Believe it is Possible! 90% of the Malawian population live without any access to affordable and reliable electricity and light.

How many people have access to electricity in Malawi?

This is about 3.5% of the population provided with access in the past 12 months, bringing the total access rate in Malawi to around 23%, up from 19%. The target is to give access to 180,000 on-grid households and 200,000 Off-Grid households by the end of June 2025, translating to an additional 1.9 million people having access to electricity.
