

Mali Photovoltaic Module Project

Overview

What is the Safo solar power plant project in Mali?

The government of Mali has launched the Safo solar power plant project in Mali. The country's President Assimi Goïta, initiated the construction in the Koulikoro region. The 100 MWp energy plant will sit on 228 hectares of land. It will utilize monocrystalline silicon photovoltaic panels and is expected to be completed in 15 months.

Is Mali developing a solar power plant?

In addition to the Safo plant, Mali is also developing the Sanankoroba solar power plant, projected to be the largest in sub-Saharan Africa with a capacity of 200 MWp. Covering 314 hectares, this plant is being constructed about thirty kilometers from the capital, Bamako, in collaboration with NovaWind, a subsidiary of Russia's Rosatom.

How long does a solar power project last in Mali?

This project has an estimated lifespan of 25 years. / Mali is a landlocked country in the Sahel belt of West Africa where 80% of the population in the rural areas do not have access to electricity, while those with access are getting most of the electricity from diesel generators.

How much does it cost to get electricity in Mali?

Studies have shown that achieving universal access to electricity in Mali would require an investment of around \$1.3 billion to extend networks and create more mini-grids, Sissoko said. Solar power is a recent development in the country.

Can Mali achieve universal access to electricity?

In rural areas, access is as low as 25%, according to Abdoulaye Makan Sissoko, an official with Mali's rural electrification agency. Studies have shown that achieving universal access to electricity in Mali would require an

investment of around \$1.3 billion to extend networks and create more mini-grids, Sissoko said.
