

Mozambique 20W solar panel construction

Overview

Will Mozambique get a solar power plant in 2023?

Future tenders are expected to be announced in Q4 of 2023, including the selection of two independent power producers for two 30 MW solar photovoltaic power plants and one 50 MW wind power plant. But Mozambique has an enormous challenge that spreads far beyond where the national grid ends.

Does Mozambique need solar energy?

In the rapidly evolving world of renewable energy, Mozambique has emerged as a significant player, especially in the solar energy sector. With its abundant sunshine and increasing focus on sustainable development, the demand for solar energy systems in Mozambique has seen a considerable rise.

Who built Mozambique's first large-scale solar power plant?

Capital and expertise from Scatec Solar, KLP and Norfund enabled the construction of Mozambique's first large-scale solar power plant. Central Solar de Mocuba (CESOM) provides over 79 GWh of electricity annually, which is equivalent to the electricity consumption of more than 170,000 households in Mozambique.

Who won a solar power plant in Moçambique?

The first tender under the programme was the Dondo solar power plant which was won by Independent Power Producer (IPP), Total Eren (now acquired by Total Energies), with a tariff of \$52.45/MWh, and is supported by Electricidade de Moçambique (EDM) and the French Development Agency (AFD).

Why is Mozambique a good place to invest in solar energy?

Firstly, Mozambique has a high solar irradiation level, making it an ideal location for harnessing solar energy. This abundant solar resource presents a sustainable and cost-effective solution for addressing the country's energy

needs.

How will Mozambique's power plant's strategic location affect the grid?

The project's strategic location will reduce energy transmission losses and improve the security of energy supply in northern Mozambique and stabilize the grid. It is estimated that the power plant's connection to the EDM grid will result in a seven percent improvement in the network default level.
