

Multiple energy storage projects in North America have been halted

Overview

□□ Over \$14 billion in green energy projects have been canceled or postponed in the U.S. due to political uncertainties. □□ The cancellations have resulted in the loss of 10,000 potential jobs in the renewable energy sector. Are big projects still in the pipeline amid Trump's retreat?

Businesses have pulled the plug on big projects amid Trump's retreat on climate action. But plenty remain in the pipeline, awaiting a Congressional decision on tax credits. Traffic on Interstate 90 drives by the shuttered Belvidere Assembly Plant in Belvidere, Ill.

How many jobs are being created by new energy projects?

Some 10,000 jobs are expected to be created by these newly announced projects—including an electric truck assembly plant that the Jeff Bezos-backed startup Slate Auto said it would site in Warsaw, Indiana. That's equal to the estimated number of job losses from all the clean energy projects that have been abandoned so far this year.

Is there a Big Green Machine in the US?

Turner leads a team that also tracks the supply chain for clean energy in the US in a database called the Big Green Machine. Some turnover is normal, and there have been a lot of projects announced since the Inflation Reduction Act was passed in 2022—so there are more in the pipeline to potentially be canceled, Turner says.
