

New Zealand home energy storage battery cabinet

Overview

Why do New Zealand homes need battery storage?

In most New Zealand homes, a large proportion of the energy produced by solar panels is sent back to the grid because it's generated when it's not needed, i.e., the middle of the day. However, adding home battery storage to a new or existing solar power system allows you to store your unused energy.

Can a solar panel system save energy in New Zealand?

In many New Zealand homes, solar panels generate energy when it is least needed—during high sunshine hours in the middle of the day. However, integrating home battery storage with a solar panel system is a great solution to store unused energy, which can then be used at night, on days with low sunlight and when utility lines are down.

Are batteries safe in New Zealand?

Yes. New Zealand has strict standards that apply to batteries including the location and installation. If these are followed, the risk of fires is very low. Can batteries be recycled?

Yes! 95% of a lithium battery has the potential to be recycled and second life battery manufacturing is occurring in New Zealand.

Is home battery storage a good option?

However, integrating home battery storage with a solar panel system is a great solution to store unused energy, which can then be used at night, on days with low sunlight and when utility lines are down. Here are some answers to commonly asked questions about home battery storage to help you decide if it's a good option for your home.

What are the different types of home storage batteries?

The two most common types of home storage batteries are lithium-ion and

lead-acid. But what are the differences between the two?

Lithium-ion is typically more expensive than lead-acid, but it's the most popular option to tie to a solar power system.

What are the best high-capacity residential home batteries?

And, when it comes to high-capacity residential home batteries, you can't overlook the LG Chem RESU. Featuring a special design believed to prevent the likelihood of failures and increase reliability, this range allows households to store more than the popular 13kWh Powerwall 2 and for half the price.
