

New photovoltaic panels plus inverter

Overview

Do solar panels need inverters?

Inverters are essential for converting solar panel DC output into home-usable AC power—your solar system won't work without one. Top inverter types include string inverters (budget-friendly), microinverters (great for shade), and hybrid inverters (battery-ready).

What is a microinverter solar panel?

Microinverters, or micros, are very small solar inverters attached directly to individual solar panels. Since each microinverter and panel operate independently, they are an excellent option for complex roof layouts and locations with shading.

Who makes Fimer solar inverters?

FIMER is a well-established Italian-based inverter manufacturer that took over ABB's solar division in early 2020. The company is in the process of revamping many of the ABB-style inverters and is expanding its range of high-quality string solar inverters for residential, commercial and utility-scale applications.

Who makes the best solar string inverter?

We review the best grid-connect solar inverters from the worlds leading manufacturers Fronius, SMA, SolarEdge, Fimer, Sungrow, Huawei, Goodwe, Solis and many more to decide who offers the highest quality and most reliable solar string inverters for residential and commercial solar.

How long do solar inverters last?

Most inverters last 10–15 years, but premium brands like Enphase and SolarEdge offer warranties up to 25 years. Inverters are essential for converting solar panel DC output into home-usable AC power—your solar system won't work without one.

Are string solar inverters a good choice for utility-scale solar farms?

String solar inverters up to and above 100kW are also increasingly popular for utility-scale solar farms due to the advantages of string-level monitoring and ease of servicing compared to central inverters. Below is our list of the most popular 3-phase inverters on the Australian market in the 8kW to 30kW and 30kW to 100kW categories.
