

Norway communication base station wind power 215KWh

Overview

What type of energy does Norway use?

Norway's electricity generation is based on almost 100 per cent renewable energy. In 2023, it was based on 89 per cent hydropower and 9 per cent wind power. At the beginning of 2023, the power supply in Norway had a total installed production capacity of 39 703 MW.

How has wind power changed in Norway?

The deployment of wind power in Norway increased dramatically in the last five years, making it the strongest growth on record. In 2022, 374 MW of new capacity was commissioned, all of which occurred onshore.

How much wind power does Norway produce?

Total wind power capacity is 5,073 MW. Wind power capacity in Norway increased by 374MW in 2022. Norway produces 14.8 TWh from wind energy, which accounts for 11.1% of the country's electricity consumption. As of now, Norway does not have any specific energy goals to meet or dedicated support mechanisms in place for wind energy development.

Where is Norway's largest wind power installation?

It will be Norway's largest wind power installation, supplying the region industry. It will be located outside Mosjøen in Nordland County, Vefsn municipality, Central Norway. Under construction since December 2019, it is expected the installation is completed towards the end of 2021.

What is a new wind power research centre in Norway?

Recently, the Norwegian Minister of Petroleum and Energy, Tina Bru, announced a new wind power research centre in Norway. The NorthWind research centre will focus on innovations, and one of its main priorities will be offshore wind power research.

Why is wind energy important in Norway?

Wind energy can power 3.3 million new jobs worldwide over the next five years. Due to Norway's petroleum industry and maritime expertise, the country has a great advantage in developing a Norwegian domestic market and an edge in reaching new markets.
