

Norway s new mobile energy storage power supply factory direct sales

①

②

Overview

Does Norway have a power supply?

Norway also has grid connexions to Russia, and a 700 MW subsea cable (NorNed) to the Netherlands recently became operational.²The net electricity import in 2006 amounted to 0.7% of the total production in Norway . Besides hydro power, renewable energy sources play a minor role in Norwegian energy supply.

Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. “There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It’s the key to turning intermittent wind and solar into a stable energy source,” explains Pål Runde, Head of Battery Norway.

How much electricity does Norway produce?

Electricity production in Norway is for the most part based on flexible hydropower, but both wind and thermal energy contributes to the Norwegian electricity production. In 2013, Norway produced 134 terawatt hours (TWh) electricity. One TWh equals one billion kilowatt hours (kWh).

How big is Norway's battery market?

batteries for stationary energy storage - a market expected to reach EUR 57 billion by 2030. Now, a more mature Norwegian battery industry has greater potential to accelerate the renewable energy transition in Europe. Today Norway has not one, but two huge battery markets.

What is battery Norway?

Battery Norway (Norwegian Battery Platform) is a national industrial collaboration platform focused on innovation and sustainable value creation opportunities, encompassing the entire battery supply chain. It will closely

follow the EU's battery strategy and act as an advisor to the authorities. Battery Norway aims to help to:

Is stationary energy storage a good idea in Norway?

Electric cars now account for 79 per cent of new cars sold in Norway, and the MS Medstraum was recently launched as the world's first electric fast ferry. In a global report on lithium-ion batteries, Norway ranked first in sustainability. These are impressive records. Even so, stationary energy storage is beginning to steal the limelight.
