

Oman energy storage battery use

Overview

The project will focus on producing critical materials used in Li-ion batteries, which power everything from electric vehicles (EVs) to renewable energy storage systems. This investment marks a major step forward for Oman as it seeks to diversify its economy beyond oil and gas. Will Oman have a solar energy storage system?

Additionally, PDO is finalizing plans for a 100 MW solar PV-based IPP, named the 'North Solar Storage IPP,' set to include Oman's first battery energy storage system (BESS). This BESS, using lithium-ion battery technology, will store electrical energy and supply a maximum of 100 MW peak power to PDO's grid during daylight hours.

Can Oman deliver a reliable and stable electricity supply?

While Oman, due to its energy market reforms of the last two decades, may be the best positioned of all the six GCC member states, to stay ahead of demand by ramping up production, whether it can deliver in the future a reliable and stable electricity supply, especially during peak times, remains to be seen.

How much will Oman's power sector invest in the next six years?

Taken together with parallel plans for the implementation of a raft of Wind IPPs and combined cycle gas turbine (CCGT) power projects, total investment in Oman's power sector is set to balloon to well over \$5 billion over the next six years through to 2030.
