

Outdoor power supply protection level

Overview

First things first, the IP rating consists of 2 digits, with the first digit is the rating of protection towards solids (e.g., Dust), and the second digit is the rating of protection against liquids. The level of ingress.

Terms such as waterproof, weatherproof, water-resistant and water-repellent are often used to describe outdoor rated products, but they don't really tell you a whole lot about the conditions in which the.

The minimum IP rating for outdoor use will depend a lot on the conditions – whether the equipment is in a partially enclosed area or a covered area. Based on the conditions: IPX3 generally offers enough protection for speakers or lights that are in a partially enclosed or covered area. IPX4 is often used as the minimum IP rating for.

The IP rating denotes the level of protection an electrical device has against the ingress of foreign objects and moisture. This article explores the various IP codes, their distinctions, and considerations to bear in mind when selecting a power supply.
