

Pack battery replacement loss

Overview

When should a battery pack be replaced?

A pack should be replaced when the capacity drops to 80 percent; however, the end-of-life threshold can vary according to application, user preference and company policy. Capacity measurement, a service that remains the best indicator for replacement, should be done every 3 months with active fleet batteries (See BU-909: Battery Test Equipment).

What are the replacement strategies for battery packs?

The replacement strategies considered two scenarios. The first scenario, the replacement of an early life failure, addresses an important open question for maintenance of battery packs. The traditional approach in pack maintenance is to replace all cells at once to control the mismatches.

Should a battery pack be replaced after an early life failure?

The first scenario, the replacement of an early life failure, addresses an important open question for maintenance of battery packs. The traditional approach in pack maintenance is to replace all cells at once to control the mismatches. This approach is clearly untenable for very large battery packs.

What happens if a car battery pack is damaged?

Often, these packs aren't serviced at a typical dealership or body shop. This means that if the packs are damaged as part of an accident, an insurance company will often write off the entire cost of car rather than the repair of a single internal component.

How can the cost of battery systems be reduced?

The effective cost of battery systems can be reduced by amortizing the cost over longer usage cycles. Two ways to extend the usage cycle of battery systems are (1) to extend the life of cells and packs in the original application, and (2) to reuse cells for other applications.

How much does it cost to replace a Tesla battery?

We've reported on Tesla's hefty battery replacement costs previously, with the Model 3 costing around \$16,000 or more to replace the battery pack, however, the cost to replace the pack is only part of the equation—the other is lack of serviceability.
