

Philippines Communications Green Base Station Ranked First

Overview

Are green cellular base stations sustainable?

This study presents an overview of sustainable and green cellular base stations (BSs), which account for most of the energy consumed in cellular networks. We review the architecture of the BS and the power consumption model, and then summarize the trends in green cellular network research over the past decade.

How many 5G sites are there in the Philippines?

By 2025, the number of mobile subscribers in the Philippines will reach 159 million, and broadband subscribers will number 10.8 million. Legacy players Globe and PLDT-Smart will lead the 5G rollout with already a combined 3,669 5G sites in country-wide locations.

How can US companies pursue telecom sector opportunities in the Philippines?

U.S. firms interested in pursuing telecom sector opportunities can work with the U.S. Commercial Service Philippines to connect with potential buyers and learn more about specific opportunities. Digital transformation is being led by local telecom firms and emerging broadband companies contributing to strong telecommunications industry growth.

How has the Philippine telecom industry changed over the years?

There has also been improvement in Philippine telecom regulations. In May 2020, the Department of Information and Communications Technology (DICT) published its first guidelines for independent cell tower construction (Common Tower Policy). The Philippines currently has only 22,405 combined cell towers operated by the three major telecom companies.

What is a green communication initiative?

The green communication initiative primarily aims to improve the energy efficiency, reduce the OPEX, and eliminate the GHG emissions of BSs to

guarantee their future evolution [2, 3]. Cellular network operators attempt to shift toward green practices using two main approaches.
