

Portable secondary lithium battery pack

Overview

What are rechargeable (secondary) batteries?

Rechargeable (secondary) batteries are electrochemical storage cells that function on the basis of a reversible chemical reaction, allowing depleted cells to be replenished and reused numerous times before requiring disposal.

What makes a good battery pack?

Portability: The ideal pack balances ample capacity with reasonable size and weight for transport. We considered packs under 30 lbs as highly portable but also included larger options for more power. Charging Speed: Faster charging, especially when relying on limited daytime sunlight, is a major convenience.

How long does a battery pack last?

Long Lifespan: 3,500+ cycles; 10 years. High Cost: The base model is more expensive as compared to other portable battery packs. Large Size: Bulky dimensions. Inverter dimensions are 27.2 × 18.9 × 8.4 in and battery dimensions are 26 × 18 × 8 in.

How long do LFP batteries last?

Dependable Usage: The LFP batteries provide 3,500+ cycles and a 10-year lifespan. The DELTA Pro Ultra also features a 20ms UPS reaction time, 16.8kW max solar input, and a unique X-Cooling Heat Dissipation System. An IP54 rating and wide operating temp range (-4 to 113°F) allow use in harsh conditions.
