

Rooftop home solar integrated machine

Overview

What are roof integrated solar panels?

Roof integrated solar panels introduction. 'In roof' solar panels are also referred to as 'roof-integrated'. Firstly, it's worth noting that 'In roof' is a bit like 'on-roof'. The panels are generally the same.

What is solar full roof?

Embrace the synergy of style and sustainability with Solar Full Roof, a 2in1 integrated solar roof. Seamlessly integrating advanced solar technology into the architecture of your home, this solution transcends conventional rooftop installations.

Can a solar full roof fit a sloped roof?

Absolutely, if your roof is sloped with a minimum pitch of 18 degrees. The Solar Full Roof is designed to integrate seamlessly with various architectural styles. Whether you're looking for a complete solar roof or a blend of solar panels with your existing roofing material, our system can be tailored to fit.

How long does a solar full roof take to install?

Experience premium solar roofing without the premium price. Blending with dummy modules ensures a uniformly sleek look. On average, a Solar Full Roof can be installed within 2 days. Compared to traditional rooftop solar panel solutions, Solarstone's 2-in-1 solar roof acts as roofing material itself, resulting in a modern and uniform-looking roof.

Why should you choose solar full roof?

One of the Solar Full Roof standout features is its minimal maintenance requirement. Unlike traditional rooftop solar solutions, where moss, fallen leaves, and debris can accumulate between the roof and solar layers, our integrated design significantly reduces such issues.
