

Solar Panel Investment Return

Overview

Solar payback periods for a new residential system can vary widely, but a common estimated range is 6-10 years. Your energy usage, local electricity rates, available incentives, system size, and choice to add energy storage to your system are some factors. How do you calculate the return on investment for solar panels?

You can calculate the return on investment for installing solar panels by calculating your total payback. Calculate the amount you spent to install a solar panel system and then figure out the amount you will save on energy bills monthly. These two numbers show how quickly your savings will cover your initial costs.

How much is a solar return on investment?

Here, the net return on the investment could be considered \$20,000 (\$36,000 in value, less \$16,000), which divided by \$16,000 and multiplied by 100% would equal a solar ROI of 125%. Although we have just illustrated how to calculate your solar ROI, this formula should always be taken with a grain of salt.

Are solar panels a good investment?

Solar panels are used to generate energy, there is a thermal energy storage system for both cooling and heating the building and an innovative ventilation system. The building is extremely well insulated and will on balance be energy-positive.
