

Solar on-site energy equipment price

Overview

How much does a commercial solar system cost?

The total cost of a commercial solar system varies widely based on size and other factors. Here are some national averages to consider: \$24,900: This is the average cost for a smaller 15 kW system, suitable for a retail outlet or clinic. \$200,000: A 100 kW system, which can produce about 136,000 kWh per year, typically costs around this amount.

How much does solar installation cost?

On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system. What else affects solar installation costs?

.

How much does a residential solar system cost?

Residential solar power system installations result in a clean, renewable energy source that requires minimal maintenance with savings that could pay back the initial investment in just a few years! Most professionally installed solar panel systems cost between \$18,000 and \$20,000 before factoring in any rebates or incentives.

How much does a solar panel cost?

The cost per watt is a standard metric for estimating solar panel costs. For commercial systems, the price typically ranges between \$1.66 and \$2.00 per watt. This is significantly lower than residential solar costs, thanks to economies of scale. \$1.66 per watt: This is the average cost for many commercial installations.

How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's “cost per watt” is a little like the “price per square foot” when you buy a house. It helps compare the value of solar energy systems in different sizes.

How much does solar power cost in 2025?

Take control of your energy costs with solar power. Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025.
