

Solar panel prices plummet

Overview

Solar prices stayed at their record-low median of \$2.48 per watt in the first half of 2025, unchanged from H2 2024. Installers absorbed financing pressures rather than raising prices before policy changes kicked in. How much did solar panels cost in 2024?

Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in 2024. According to the report, the median quoted price of solar decreased for the third year in a row, hitting its lowest in recorded data at \$2.50 per watt.

Will oversupply depress solar prices?

The world's solar manufacturing capacity is set to remain at more than double annual installations in the coming years, with the dynamics of oversupply continuing to depress panel prices, according to the International Energy Agency.

How much do solar panels cost per watt?

Solar panels' price dropped to 8.7 cents per watt on July 2, the lowest level based on comparable data going back to 2011. Follow topics and authors from this story to see more like this in your personalized homepage feed and to receive email updates.

How much does solar cost?

According to the report, the median quoted price of solar decreased for the third year in a row, hitting its lowest in recorded data at \$2.50 per watt. "For a system at the median size of 11.5 kilowatts, that amounts to \$28,750 before incentives," the report said. With incentives, you can save as much as 75% of installation costs.

Do solar panels save money?

According to the U.S. Department of Energy, you can save up to \$200 monthly on your energy bill while paying back the cost of your system in under five years. Solar panels also help decrease planet-overheating pollution from traditional dirty energy sources, such as coal and natural gas.

Are solar panels going down in 2023?

Having already fallen to 60% in 2023 — a year-over-year decrease of about 10 percentage points — the rate is set to drop further still, to below 40% in 2024 to 2028. Utilization rates in China, the world leader in solar panels, are set to be even lower than the global average in the coming years, the IEA said.
