## Overview

---

How does tariff risk affect a battery energy storage system (BESS) project?

Mitigating tariff risk in battery energy storage system (BESS) projects is crucial for ensuring project financial viability, as tariff changes can significantly affect cost structures and overall project economics.

How are battery tariffs reshaping global trade?

As new battery tariffs and expanded China tariffs continue to reshape global trade, U.S. policymakers and businesses are reevaluating the domestic battery supply chain. This section outlines the current status of U.S. battery production, the resources required to scale it, and the challenges involved in reducing reliance on overseas suppliers.

How has the 2025 expansion of battery tariffs impacted solar storage?

The 2025 expansion of battery tariffs has significantly impacted the pricing structure of solar battery storage projects across the U.S. Utility-scale storage systems, often used to support renewable energy sources such as solar and wind, are now subject to import duties ranging from 54% to over 100% on components sourced from China.

Which stationary energy storage products are affected by battery tariffs?

Stationary Energy Storage Products Affected by Battery Tariffs Large-format stationary energy storage systems like Tesla's Powerwall and Megapack also face cost increases due to the latest tariffs. These products rely heavily on lithium battery cells sourced from Chinese suppliers.

How will tariffs affect the battery industry in 2025?

As of 2025, the expansion of tariffs, particularly those targeting battery components and upstream materials, continues to influence cost structures, supply chains, and manufacturing timelines across multiple U.S. industries.

## Are Chinese tariffs affecting the battery market?

The U.S. battery market has entered a period of pricing uncertainty due to expanded battery tariffs. Starting in 2025, new Chinese tariffs on imported lithium-ion cells and components—especially those used in energy storage systems—have reached levels as high as 104%, according to updated trade filings.
