

# **The best way to store photovoltaic energy**

## Overview

---

When you install a grid-tied solar system, the power grid acts as an immense source of energy storage. On the other hand, there is also a possibility of storing solar energy in batteries. In this scenario, a solar battery bank simply acts as a replacement of the grid. So, if you add a battery bank to your PV.

Solar panels generate electricity from the sunlight during the day. This means that if the grid goes down at night, solar panels will not generate electricity and therefore you cannot power.

Batteries are the most used form of solar energy storage, but there are even other options to store electricity of your PV system. One of them is directing the electricity from your PV to water electrolyzers, which generate hydrogen gas. Hydrogen is.

By converting electrical energy into chemical energy, batteries offer a reliable way to store solar energy for use when needed—whether during the night or during a power outage.
