

Transfer station equipment energy storage cabinet

Overview

What is an Energy Transfer Station?

An Energy Transfer Station (ETS) is a type of infrastructure designed to include the supply, installation, and commissioning of mechanical and electrical equipment and piping.

Why should you choose energy storage cabinets?

This ensures that energy storage cabinets can provide a complete solution in emergency situations such as fires. To accommodate different climates, we provide professional recommendations based on customer usage scenarios and requirements.

Do energy storage cabinets need to be painted?

This ensures that energy storage cabinets maintain excellent appearance and performance, as well as resisting corrosion and UV radiation. We place particular emphasis on comprehensive pre-paint processes, including degreasing, cleaning and neutralisation, to ensure excellent paint adhesion and quality.
