

# **Two-kilowatt-hour cost-effective outdoor power supply**

## Overview

---

What are the best portable power stations?

To help you decide, I tested the efficiency, in a variety of scenarios, of the best portable power stations from Jackery, Oupes, EcoFlow, Anker, Goal Zero, Greccell, Bluetti, Dakota Lithium, Lion Energy, Vtoman, and Oupes. [↓ Jump to the Rest of the Field](#) [↓ What to Know Before Purchasing a Portable Power Station.](#)

What is a kilowatt-hour (kWh)?

A kilowatt-hour (kWh) is a way of measuring the amount of energy you're using. One kilowatt-hour is equal to how much energy that would be used by keeping a 1000 W appliance running for 60 minutes, so for example, if you left a 50 W appliance running, in 20 hours it would use 1 kWh of energy.

How do you calculate energy use per kilowatt hour?

Energy use in kilowatt-hours is determined by multiplying the number of hours appliance operates by its rated power in kilowatts. We then multiply the electricity cost per kilowatt hour to calculate what it costs to keep the appliance running. Thus, we use the following formula:.

How do you calculate kilowatt-hours?

One kilowatt-hour is equal to how much energy that would be used by keeping a 1000 W appliance running for 60 minutes, so for example, if you left a 50 W appliance running, in 20 hours it would use 1 kWh of energy. Energy use in kilowatt-hours is determined by multiplying the number of hours appliance operates by its rated power in kilowatts.

How much power do you need for camping?

The answer to this depends largely on what you intended to do with it. If all you want is backup power for your family's phones while camping over the weekend, you can get away with something relatively small — 200 watt hours

would be more than enough.
