

# **What are the three types of solar photovoltaic panels**

## Overview

---

There are three main types of solar panels used in solar projects: monocrystalline, polycrystalline, and thin-film. Each kind of solar panel has different characteristics, thus making certain panels more suitable for different types of solar installations.

The three main types of solar panels are monocrystalline, polycrystalline, and thin film. Monocrystalline solar panels are the most efficient. Polycrystalline solar panels can be the most cost-effective. Thin-film solar panels can be the best for DIY projects or RVs.
