

# **What inverter should I use for my solar rooftop**

## Overview

---

Which solar inverter is best?

CNET experts have compared the most popular solar inverters' specs, warranties, prices and more. The SolarEdge Home Wave Inverter is our top pick in 2025. It was the most efficient inverter we looked at, letting you use a larger percentage of the energy your solar panels generate. This translates to less and more power to use around the house.

Which solar inverter should I buy in 2025?

Every solar system needs some kind of inverter to convert sunlight into usable electricity. CNET experts have compared the most popular solar inverters' specs, warranties, prices and more. The SolarEdge Home Wave Inverter is our top pick in 2025.

Do solar panels need inverters?

Inverters are essential for converting solar panel DC output into home-usable AC power—your solar system won't work without one. Top inverter types include string inverters (budget-friendly), microinverters (great for shade), and hybrid inverters (battery-ready).

How do I choose a solar inverter?

Ensure the inverter matches the specifications of your solar panels and overall system capacity. For example, a mismatch between panel wattage and inverter capacity can lead to energy loss or system inefficiency. ESAS experts can help you ensure perfect compatibility. Look for inverters with high efficiency ratings, typically above 95%.

What size solar inverter do I Need?

The inverter must align with your solar panel array's total output and the grid requirements in your region. For example, a typical residential system may require a 3–10kW inverter, while large commercial systems often demand

30kW or more.

What are the different types of solar inverters?

For instance, a microinverter system can increase energy output by up to 25% in partially shaded areas. String inverters connect a series (or “string”) of panels to a single inverter. These are the most common type used in residential and commercial solar systems.
