

Which outdoor power supply charges faster

Overview

Do all power stations provide a power source?

While all power stations are intended to provide a power source, each model differs in their overall design and included features. Some models have an intuitive mobile app to fully control your power station wirelessly. Others may offer expandable battery capacity, and some are advertised as being used as an uninterruptible power supply.

Which portable power station should I buy?

If you are searching for a compact portable power station for on-the-go activities, the Jackery Explorer 300 is our recommendation. This unit is ideal for charging phones and laptops or running small appliances like lights and fans. Its small form makes it an extremely versatile option.

How important is a good display when buying a power station?

While maybe not the first consideration when shopping for a power station, a good display becomes an important factor when the power goes out. The EcoFlow Delta Pro landed at the top of our usability metric.

How long does it take to charge a power station?

Some of our best-performing power stations could achieve a full charge in under an hour, while others took upwards of fourteen hours. This is largely due to battery chemistry and the included charging input cables provided by different companies. Starting off, the Anker Solix C1000 was one of our more impressive units in terms of charging speeds.

Which ecoflow power station should you buy?

The EcoFlow Delta Pro is one of the most extensive units on the market. Between its dialed display, massive expansion capabilities, and a plethora of add-ons, this power station checks off all the boxes.
